Ray Zhang (778) 669 - 0613, rayzhangbox@gmail.com

Full-Stack & AI Engineer | 3+ Years Industry Experience

TECHNICAL SKILLS

AI / LLM: LangChain, LangGraph, Agentic RAG, Vector Databases, HITL, LLM Fine-tuning, LangSmith, LangFuse
Backend: Python, FastAPI, Java, Spring Boot, Redis, RabbitMQ, Nacos, MinIO, SQL, NoSQL, Microsoft SQL
Frontend: TypeScript, JavaScript, React, Vue, Angular, SCSS/Sass, Pinia, SSE, WebSocket
DevOps & Observability: Docker, Git, CI/CD (Jenkins, Azure DevOps), Sentry (APM / RUM), Datadog, Dynatrace
Cloud & Others: Azure, Agile, Microservices, Unit/Integration/E2E/Regression/PTS Performance Testing, AODA

PROFESSIONAL EXPERIENCE

AI Engineer | Sichuan Joyou Digital Technology Co., Ltd *2025-2026*

- Developed tool-calling agentic RAG pipelines using FastAPI, LangGraph and vector databases; mitigated LLM hallucinations, improved accuracy/search speed and optimized token costs
- Fine tuned LLM in 4 months with embeddings and designed human-in-the-loop (HITL) validation
- Adopted LangSmith/ LangFuse for tracing, metrics and pipeline governance
- Partnered with backend and security teams on system integration

Backend Developer | Sichuan Joyou Digital Technology Co., Ltd *2025-2026*

- Implemented Docker-containerized Spring Boot microservices with custom SQL layers, Redis caching, RabbitMQ message queues and Nacos-driven load balancing
- Tuned throughput to reduce service overload; enforced sensitive-data encryption, gateway access control, and integrated MinIO for NoSQL unstructured storage
- Enabled monitoring and logging with Sentry APM; wrote unit and integration tests, configured Jenkins CI/CD; maintained API docs and Git repositories

Frontend Developer | Sichuan Joyou Digital Technology Co., Ltd *2024-2025*

- Started from scratch on developing visualisation dashboards, file-management modules and long-connection (SSE/Websocket) features for mobile-compatible applications using Typescript and SCSS
- Enhanced user experience, implemented role-based access control, dynamic routing and Pinia state management; leveraged caching to lower page-load latency
- Instrumented frontend logging and RUM via Sentry; delivered unit, E2E and PTS performance testing; hooked with CI/CD using Jenkins; aligned deliverables with designers and product managers

Full-Stack Developer | Ministry of Transportation, Toronto, ON *2023-2024*

- Developed portal features using Angular, Spring Boot, NodeJS, Docker and Microsoft SQL
- Optimized data-processing throughput and strengthened security; integrated third-party Google reCAPTCHA bot-detection and enforced AODA accessibility compliance
- Managed production including logging, alerting and on-call via Azure APM
- Implemented integration, E2E and regression tests; built Azure DevOps CI/CD pipelines; maintained API documentation and Git repository management

EDUCATION

Master of Computer Science (Co-op) | Simon Fraser University, Burnaby, BC
Bachelor of Computer Science (Honours, Co-op) | University of Guelph, Guelph, ON
